Ingress on game

Ingress an ar enabled game is created by which company.

Mobile game of reality Based on position 2013 Video GameingRe:ssdeveloper (s) NianticPublisher (s) NianticPublicsichichisher (s) Nianticplatform (s) Android, Iosrelease 14 December 2013 IngressandoidDecerBermber 14, 2013 [1] IosJuly 14, 2014 [2] Input PrimeWW: 5 November 2018 3] Gender (s) Based on Arlocation Based Gamemema Multiplayer online GameMassarily multiplayer online strategy Real-time GameÀ € mode (s) MultiplayerÀ € Ingress (or Prime Ingress) is a mobile game Augmented RealtÀ (AR) developed and published by Niantic for Android and iOS devices. The game published for the first time on December 14th 2013 for Android devices and then for iOS devices on July 14, 2014. [4] The game is free to play, use a Freemium business model and supports in-app purchases For additional in-game articles. The mobile app was downloaded more than 20 million times worldwide in November 2018. [3] Input uses the mobile device GPS to locate and interact with "Portals" which are near the real position of the player. Portals are physical points of interest in which "human creativity and naive is expressed" often manifesting as public art as statues and monuments, unique architecture, outdoor murals, historic buildings, local community hubs and other human success displays. [5] The game uses portals as elements of a science fiction background together with an open narrative provided through various forms of media. [6] [7] Setting and plot A transdimensional force, transdimensional force called the exotic matter (XM) has been discovered as a by-product of Higgs Boson search (great Collider Hadron) from a team of scientists to CERN in Switzerland. [8] [9] This substance has been associated with shapers, a mysterious phenomenon or alien breed. [10] Inside the game, human reactions to this discovery fall into two factions known as illuminated and resistance. The illuminated faction embraces the powers of XM to transcend humanity and believe that their mission is to assist humanity illumination by exploiting this energy. The resistance faction See XM as potential threat to humanity and believe that their mission is to defend the human race resisting the effects of those who try to control others with XM. [9] These two factions are the opposite "sides" or "team" in the game; the resistance is represented in the blue color game and illuminated by greenery. Both teams naturally tended to balance each other in the population. [11] Gameplay The entrance gameplay has been described as combining geocaching elements with capturing the flag. [12] Play Environment An example of the Intel map. Portals, connections, control fields (colorful spaces) and a special Overlap of Google Maps Layer A player who uses his mobile device (or "scanner") is presented with a map that represents the surrounding area. The map has a black background and is completely unmarked, with the exception of buildings and streets outlined in gray but not labeled, and water bodies. These geographical features are provided by OpenStreetMap and previously Google Maps. Visible on the map are portals, exotic matters, connections and control fields. Distances from the player to the play positions are displayed in metric units. Players must be physically close to the objects on the map to interact with them. The scanner represents the player as a small arrowhead in the center of a circle 40 meters (130 feet) ranging, which represents the perimeter within which direct interaction is possible. A player sees only his own position and no other player. The color of the arrow tip corresponds to the player's faction. A player can "hacking" a nearby portal Acquire objects, some of which can also be used to reintegrate XM. [13] Players are rewarded with action points (AP) for actions within the game. Accumulate AP al of some thresholds grant higher access levels. [14] Access levels are numbered from 1 to 16, with 16 being the highest. The game usually rewards more AP for having embarked enemy portals that for the maintenance of yours If a player is in numerical inferiority by members of the other faction, they will tend to accumulate AP at a faster pace as a way to level the playing field. [15] In addition to gaining AP, some actions within the game can earn a player a medal. The medals are typically multiple levels (classified in bronze, silver, gold, platinum and onyx respectively) and become requirements for level progress than level 8. [14] [16] Most medals is based with the Statistics: For example, capturing portals, the total muzzle captured, the fields and connections created, various offensive actions and also successfully discovering new portals. Some medals are limited to the time they require particular results in a set period of time. Some badges are exclusive and can only be obtained by attending special events. In September 2014, Niantic introduced missions to the game. A mission is a set of users created by the user to visit (waypoint) and interact with in specified ways. Some missions list all waypoints from the beginning, while others reveal them only one at a time when the user proceeds from one to the next one. Complete the missions Press the player with a mission medal displayed on the agent's profile. [16] [17] Portals in the game, the earth has a large number of "portals", made visible by the scanner. They are green, blue or gray colored, depending on the weight respectively on the fact that they are currently controlled by the illuminated, resistance, or not claimed. Players claim portals for their faction "Distribute" at least one "resonator" on them. They can also add "modifications" to protect portals or increase their power in various ways. If a portal is claimed by the enemy, the player must first neutralize it by destroying the resonators of opponents with weapons called XMP ("exotic impetus") Burrrsr. Players acquire gambling objects (resonators, XMP bumpers, etc.) santolendo themselves, typically walking, by bicycle, or driving, within 40 meters (130 feet) of a portal and "hacking" by selecting this option on their scanners. Players can also earn additional objects and AP for "glyph hacking" a portal, where different models and retracials are shown briefly within a term. The portals are typically associated with buildings and landmarks of the historical or architectural meaning - such as sculptures, murals and other public arts, libraries, post offices, memorials, places of worship, public transit hubs, parks and other recreational or tourist spaces or With corporate positions. [18] Players can send requests for the creation of new portals if they meet the level requirements [19]. It was designed to launch the game that would allow Google to generate data for its location-based services. [20] Starting from July 2016, 15 million portals had been presented by the entry community, and five million those were included in the game. [21] At the time of the prime version of Ingress in November 2018, Niantic said that "agents in over 200 countries participated in over 2,000 real world events and visited over 1.2 billion portals". [3] Recon portal operation In November 2016, "Operation Portal Recon" (OPR) was launched in Beta in San Francisco, Tohoku and Kyushu. Operation Portal Recon is a service in which high-level entry players can evaluate portal network candidates. [22] OPR EXITED BETA in May 2017 and has become available for all level 16 players. [23] The level requirement for OPR has been reduced several times with the most recent changes made in July 2017, making OPR available For all readers of level 12 or higher. [24] The portal requests are returned to the entrance to September After a two-year pause, due to the Recon operating portal. [25] Niantica announced in September 2018 The ability to present the nominations of PokÀ © Stop through PokÀ © Mon Go with a first beta test in South Korea and Brazil. The nominations of the Nomination PokÀ © Stop Nomination Beta are reviewed by Operation Portal Recon users. [26] [27] In October 2019, Nisticic announced Niantic Niantic As expansion to OPR, where admissible players can review and present their candidacy through other Niantic products such as PokÀf © Mon Go and Harry Potter-. UNITED WIZARDS [28] LINK AND CONTROL FIELDS WITHOUT two portals that have all eight distributed resonators and are controlled by the same faction can be connected by a player from that faction that stands within the range of one and has a key Portal for the other. The maximum length of a connection depends on the average level of the portal and any mod that amplify the portal connection range. However, connections cannot cross, an existing link regardless of the faction. Portals can keep the connections and / or fields connected to them when the portal contains at least three resonators. Once the portal has less than three resonators, all connections and fields on the portal are destroyed. The connections between portals can vary from several meters to thousands of kilometers, created in transactions of considerable logistics complexity. [29] In more complex operations, links and fields can when extend to countries and oceans. When three portals are connected in a triangle, they create a control field, supporting the unit (MU) within that field for their faction. In the context of the game, checking fields align the population € thoughts with faction. The control fields are measured by the dimension of the human population that lives under the field. [30] Therefore, the largest control field, especially the units earned. Opposite faction can destroy a control field by destroying one or more of the ties that compose it. The largest formed control field between Germany, Greece, and Ukraine, and took four months of planning involving 200 players. [29] Development and release Ingress was released in beta closed on November 15th 2012. [31] [32] [33] [34] with an accompanying viral online marketing campaign. The latter has been noted since previous advertising efforts 8 November and was noted for events such as Comic-Con of San Diego on 12 July, 2012. [35] At the time of the entry release for the separation of Niantic from Google in 2015, Nisticic had 35 employees. [36] [37] An interview in 2013 described ingress as a "proof of concept" for other AR games built on Google Maps data. [38] It was designed to be aimed at a niche market of players. [39] Ingress data was used to populate positions for Poka À © stops and gyms inside PokÀ © Mon Go Posted in July 2016. [40] (See also PokÀf À © Mon Go À, Àšã, Development.) Niantic sees first entry as an opportunity to innovate in design the increased reality of play, which can be applied to its other games based on licensed intellectual properties. Niantic has also adjusted the start of new entry players the first to be more in-depth, based on the response to the Pokemon Go initiation procedures. [41] Prime Ingresses in December 2017, Nisticic announced a completely renewed version of the Game, with the Primo Ingress brand, would be released in 2018 with a new customer completely rewritten and the lessons learned from the great popularity of PokÀf À © Mon Go. The new version has a slightly different back history similar to a superhero origin theme And more florid graphics. [42] Technologically the new version uses Arkit of Apple and Google Arcore, and the network level transition from JSON for protobuf in line with the style of engineering of PokÀf À © Mon Go. [36] [43] Prime launched the 5 November 2018 as an update for the existing game input. [3] Niantic also maintained the old entry of the game and with retroactive effect called the oldest application as a scanner [drawn up]. The intention Old entrance App was to help the aid à €
